

```
print("hello world")
```

```
hello world
```

```
# variable  
x = 5  
y = 10  
sum = x + y  
print(sum)
```

```
15
```

```
#variable  
# create the variable  
x = "john"  
y = 55  
print(x)  
print(y)
```

```
john  
55
```

```
# variable  
#create the variable  
x = "john"  
y = 85  
print(type(x))  
print(type(y))
```

```
<class 'str'>  
<class 'int'>
```
